Orthopaedic Consumables

Joint Replacement Implants

These are used in surgeries like hip and knee replacements, which are common procedures, especially in an aging population.

Trauma Implants

These are used to treat fractures and other bone injuries, which are prevalent due to accidents and injuries

Spinal Implants

These are used to treat spinal disorders such as herniated discs and spinal stenosis.

Orthopaedic braces and supports

These are used to provide support and stability to joints and limbs, and to aid in recovery from injuries.

Arthroscopy equipment

This minimally invasive surgical technique is widely used for diagnosing and treating joint problems.
